"What kind of activities are there for the Alzheimer's patient?" is a question that comes up often. I always recommend this book. Carmel describes all kind of activities: music, exercise, food preparation, crafts, gardening, solo activities, family games, and reminiscence. I especially like the chapter on reminiscence--with the life collage, memory book, memory box, and more.

Caregiver education, patients' ADL, and IADL were associated with the patients' score on the Quality of Life in Alzheimer's Disease (QoL-AD) scale. In addition to these variables, MMSE, NPI, and NPI-distress were associated with the caregiver scores on QoL-AD. Conclusion: From a clinical point of view, the proxy-rated scores of QoL cannot replace the self-ratings of the patients. It is important to detect Alzheimer's disease in early stages so that cognitive functioning would be improved by medication and training. In this paper, we propose two attention model networks for detecting Alzheimer's disease from MRI images to help early detection efforts at the preclinical stage. We also compare the performance of these two attention network models with a baseline model. Buy a cheap copy of Failure-Free Activities for the book by Carmel B. Sheridan.
