It's just that their reports were suppressed or ignored by the people making the decisions." -David Brooks, "The New York Times", "No one was more prescient than James Fallows about the war in Iraq and what it would entail" Books. *Blind Into Baghdad_ America's War in Iraq* (2006) by James Fallows. Peter R Mansoor - *Baghdad at Sunrise A Brigade Commanders War in Iraq* When America entered the Vietnam War, in which McPeak flew combat missions over the jungle, the public couldn't imagine how badly combat against a "weak" foe might turn out for the United States. Since that time, and because of the Vietnam experience, we have generally overdrawn the risks of combat itself. If Saddam Hussein could be destroyed by a death ray or captured by a ninja squad that sneaked into Baghdad and spirited him away, the United States might plausibly call the job done. It would still have to wonder what Iraq's next leader might do with the weapons laboratories, but the immediate problem would be solved. *Blind Into Baghdad*. The U.S. occupation of Iraq is a debacle not because the government did no planning but because a vast amount of expert planning was willfully ignored by the people in charge. The inside story of a historic failure. The wisdom of their preparations for the aftermath of military victory in Iraq is the question. Feith's argument was a less defensive-sounding version of the Administration's general response to criticisms of its postwar policy: Life is uncertain, especially when the lid comes off a long-tyrannized society. America should view its involvement in Iraq, the summary report said, not as it had Afghanistan, which was left to stew in lightly supervised warlordism, but as it had Germany and Japan, which were rebuilt over many years.
