Apache Lucene and Solr are highly capable open source search technologies that make it easy for organizations to enhance data access dramatically. Big data often also demands real-time, large-scale information access. In light of this shift, the Lucene and Solr communities found themselves at a crossroads: the core underpinnings of Lucene began to show their age under the stressors of big data applications such as indexing all of the Twittersphere (see Related topics). There could be some additions for playing with lucene behind the book's code(those will be tagged somehow). Also keep in mind that the project is written in 2015 using the latest available lucene version - 5.2.1 so not be surprised with the new versions stuff (this project is not intended to be a 100% copy of the original one). About. When Lucene first hit the scene five years ago, it was nothing short of amazing. By using this open-source, highly scalable, super-fast search engine, developers could integrate search into applications quickly and efficiently. A lot has changed since then-search has grown from a "nice-to-have" feature into an indispensable part of most enterprise applications. Lucene now powers search in Since the first edition of Lucene in Action was published in 2004, Lucene internals and its API have gone through radical changes that called for more than just minor book updates.
