A course in research ethics can help such scientists to appreciate that it is their responsibility to know professional conventions as well as to understand the public nature of morality. This student composed lab books without performing experiments, added radioactive material to gels to produce bands where he wished those bands to be, and lied to his colleagues about his actions. The ethics of scientific research is somewhat unique within professional ethics in the sense that good science requires the ethical practice of science (this is discussed in more detail in Section 4). Nevertheless, a course in research ethics cannot and should not have as its central focus the question, "Why should I be moral?" This question, while important, is not specific to the field of scientific research.
