This book aims to equip clinicians who perform complex gastrointestinal surgery with the knowledge and tools to identify, manage, and hopefully avoid some of the more difficult and challenging perioperative clinical scenarios. Topics include a broad spectrum of complex gastrointestinal surgery, including upper gastrointestinal (GI), hepatopancreaticobiliary, and colorectal procedures.Â vasculature of the airway and the gastric conduit. If a TEF occurs, there is a step-wise and ordered approach to the management that encompasses conservative, endoscopic, and operative measures. An individualized approach to TEF management that takes into consideration the size and location of the TEF as well as the condition of the gastric conduit will ensure the best outcomes. Presents a concise but in-depth information of the various problems a surgeon faces in choosing and preparing a patient for surgery and also managing the various complications that follow after surgery of the gastrointestinal system. Focuses on careful preoperative preparation, use of rigid intraoperative techniques, and thorough postoperative support to lessen the incidence of complications following gastrointestinal surgery. Separate chapters are devoted to advances in research and techniques, conventional tubes and drains and suture materials that form an integral part of good surgery lead
