Description:

The uplifting, amazing true story—a *New York Times* bestseller

This edition of Margot Lee Shetterly's acclaimed book is perfect for young readers. It is the powerful story of four African-American female mathematicians at NASA who helped achieve some of the greatest moments in our space program. Now a major motion picture starring Taraji P. Henson, Octavia Spencer, Janelle Monae, Kirsten Dunst, and Kevin Costner.

Before John Glenn orbited the earth, or Neil Armstrong walked on the moon, a group of dedicated female mathematicians known as "human computers" used pencils, slide rules, and adding machines to calculate the numbers that would launch rockets, and

astronauts, into space.

This book brings to life the stories of Dorothy Vaughan, Mary Jackson, Katherine Johnson, and Christine Darden, who lived through the Civil Rights era, the Space Race, the Cold War, and the movement for gender equality, and whose work forever changed the face of NASA and the country.

This edition of Margot Lee Shetterly's acclaimed book is perfect for young readers. It's the powerful story of four African-American female mathematicians at NASA who helped achieve some of the greatest moments in our space program. Before John Glenn orbited the earth, or Neil Armstrong walked on the moon, a group of dedicated female mathematicians known as "human computers" used pencils, slide rules, and adding machines to calculate the numbers that would launch rockets, and astronauts, into space. Read Common Sense Media's Hidden Figures Young Readers' Edition review, age rating, and parents guide. Parents need to know that Hidden Figures Young Readers' Edition, by Margot Lee Shetterly, is a kids' version of the best-selling book for adults that inspired the Oscar-nominated film of the same name. It brings to light the story of four African American women mathematicians who worked on the teams developing aircraft and spacecraft for the United States. The book starts earlier than the film, during World War II, when one of the women first got hired as a "computer" (someone doing mathematical calculations) helping to develop faster planes for the war effort. Before John Glenn orbited the earth, or Neil Armstrong walked on the moon, a group of dedicated female mathematicians known as "human computers" used pencils, slide rules, and adding machines to calculate the numbers that would launch rockets, and astronauts, into space.
