I've read a few books on lung cancer and this is by far the best. Full of facts. Well written by experts in the field and written so that non medical people can understand yet still get a lot of detailed information. She has worked with cancer patients at Johns Hopkins for over 30 years. Ms. Walczak has worked in the genitourinary medical oncology division for the past ten years and has cared for many patients, including patients with kidney cancer. She has authored numerous articles and book chapters in the cancer field and is a member of the Sigma Theta Tau nursing honor society and the Oncology Nursing Society. About one-third of those patients will have cancer that is confined to the kidney, another third will have locally advanced (involving a large part of the kidney and the surrounding area) cancer, and another third will have cancer that is metastatic, meaning that it has spread or traveled to other areas in the body.
