

A Framework for Computer Security. System Development Corporation, 1975. Arthur A. Bushkin. 1975

ABSTRACT Teaching Network Security course is a challenging task. One of the challenges is that networks have become more complicated and prone to attacks. Network policy forms a framework to protect services and assets identified in step 1 and 2, against risks discovered in step 3 of the model. According to RFC2196 [4], a good security policy includes nine elements: Accountability Policy, Acceptable Usage Policy, General Access Policy, Internet Access Policy, DMZ Web server and FTP Server Access Policy, Authentication Policy, Availability Statement, Computer Technology Purchasing Guidelines, Privacy Policy, and Information Technology Systems and Network Maintenance Policy.
